*Sponsored by the Research in Global Child Advocacy SIG of the American Educational Research Association*

This volume examines the interface between young children and information and communication technology (ICT) from a global perspective. There are three primary areas of emphasis: (a) ICT as a teaching and learning tool across cultures and countries to promote the social and cognitive development of young children; (b) research on developmentally appropriate education on cybersafety and cybercitizenship; and (c) studies on the influence of digital technologies on young children, including exposure to inappropriate content and participation in online social networks.
